

Project Information

- Code Challenge
- Team Lewis Birrer

Test Objectives

- oneSecurityAndTwoUsers
 - See if a security and the 2 users are correctly created and added to the DB
- createOrder
 - Base on the type of the order, see if an order is created and added to the DB

Test Execution Details

- Scenario: Basic trading Buy Sell
- Scenario: Basic trading Sell Buy
- Scenario: No trades occur

Test Execution Results

- Number of tests by type
- 3 Passed
- Failed

Test Coverage

- 00 Smoke Tests

Test Summary

I only tested the 3 scenarios present in the trade feature. I had problem with the method CreateOrder. I always had a NullPointerException which I solved by creating a buyOrder1 and than pass it as an parameter to instatiate the given variable buyOrder.

When I test it with the swagger everything seems to work but it's seems like the trade table remains empty eventhough the trades occurs.

I was finish with my test 2 weeks ago now but I was not able to push it my git repository because I didn't have the time to. And I also did not know how to write the test report and did not know If I was finish or not.
